

Signalization package

Clear, easy-to-use, and reliable signalization – car and landing call buttons – plays an important role in providing the best possible passenger experience in your elevator and on the landings. This upgrade package replaces the existing signalization with one of our ReVive KSS 210 or KSS 430 series products. Because all KSS signalization products are fully compliant with EN81-70, the upgrade will also improve the accessibility of your elevator.

KEY BENEFITS

- Improves usability and accessibility
- Better reliability with less downtime
- Improves visual appearance of elevator

TECHNICAL INFORMATION

- Installation time:
